

# Algebraic Geometry

Friday, September 1, 2006 (All day) - Friday, June 1, 2007 (All day)  
(2006-2007)

During the academic year 2006-07, the School of Mathematics will have a special program on algebraic geometry. We don't want to focus on any single aspect, but rather aim to have many flavors of algebraic geometry and its applications represented, including (not exhaustive list) cohomology theories, motives, moduli spaces, Shimura varieties, complex or p-adic analytic methods and singularities.

During term II there will be a seminar and two workshops on homological mirror symmetry. The first workshop, Mathematical Foundations of Homological Mirror Symmetry, will take place during the period January 22-26, 2007; the second, Applications of Homological Mirror Symmetry from March 26 to March 30.
