

Math notes

Vladimir Voevodsky

Started June 10 2009

June 10, 2009 Next set of questions to answer:

1. learn the details of the methods of estimation of the date of MRCA for a set of Y-chromosome samples which are used in the literature,
2. construct the path system for a singleton population with individual ages,
3. construct the path system for a population in which individuals are jointed into couples and children produced by couples (ageless, to start with).
